

TOWNSHIP OF UNION PUBLIC SCHOOLS

Grade 4 Mathematics

Adopted: December 19, 2023

Unit Title: Mathematics – Place Value and Operations with Whole Numbers – Unit 1 – Module A

Grade level: Grade 4

Timeframe: 21 Days

Rationale

Grade 4 – Place Value and Operations with Whole Numbers - Unit 1, Module A

Unit 1 focuses on place value and builds on learners' prior work reading and writing numbers using base-ten numerals, number names, and expanded form. Learners go beyond representing numbers to 1000 to representing any whole number in any of these forms. They use these understandings to round numbers to any place.

Having been introduced to multiplication and division in grade 3, grade 4 learners use these understandings to find factor pairs and to determine whether one whole number is a multiple of another one-digit number. They deepen their understanding of multiplication and relationships to represent verbal statements of multiplicative comparisons as multiplication equations. They continue to solve multistep word problems and extend that skill to interpreting problems for which the remainder must be interpreted. Learners represent these problems using equations with a variable. They use both mental computation and estimation strategies to assess the reasonableness of their answers.

In grade 3, learners' experiences developed fluency for addition and subtraction within 1000. They demonstrated fluency using various strategies and algorithms based on place value or properties of operations. In grade 4, students become fluent with the standard algorithm for addition and subtraction for any multi-digit whole numbers.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Guiding Questions

- How do we recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right?
- How do we read and write multi-digit whole numbers using base ten numerals, number names, and expanded form?
- How do we compare two multi-digit numbers based on means of the digits in each place using $>$, $=$, and $<$ symbols to record the results of comparisons?
- How do we use place value understandings to round multi-digit whole numbers to any place?
- How do we fluently add and subtract multi-digit whole numbers using the standard algorithm?

Standards

Standards (Taught and Assessed):

- 4.NBT.A.1 Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. *For example, recognize that $700 \div 70 = 10$ by applying concepts of place value and division.*
- 4.NBT.A.2 Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons.
- 4.NBT.A.3 Use place value understanding to round multi-digit whole numbers to any place.
- 4.NBT.B.4 Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Key: ■ Major Cluster □ Supporting Cluster ◎ Additional Cluster

Highlighted Career Ready Practices and 21st Century Themes/Skills

- 9.1.4.A.1 Recognize a problem and brainstorm ways to solve the problem individually or collaboratively.
- 9.1.4.A.2 Evaluate available resources that can assist in solving problems.
- 9.1.4.A.5 Apply critical thinking and problem-solving skills in classroom and family settings.
- 9.2.4.A.4 Explain why knowledge and skills acquired in the elementary grades lay the foundation for future academic and career success.
- CRP1. Act as a responsible and contributing citizen and employee.
- CRP2. Apply appropriate academic and technical skills.
- CRP4. Communicate clearly and effectively and with reason.
- CRP6. Demonstrate creativity and innovation.
- CRP8. Utilize critical thinking to make sense of problems and persevere in solving them.
- CRP11. Use technology to enhance productivity.

Social-Emotional Learning Competencies

- Self-Awareness
- Self-Management
- Relationship Skills
- Responsible Decision-Making

Unit Title: Mathematics – Place Value and Operations with Whole Numbers – Unit 1 – Module B

Grade level: Grade 4

Timeframe: 25 Days

Rationale

Grade 4 – Place Value and Operations with Whole Numbers - Unit 1, Module A

Unit 1 focuses on place value and builds on learners' prior work reading and writing numbers using base-ten numerals, number names, and expanded form. Learners go beyond representing numbers to 1000 to representing any whole number in any of these forms. They use these understandings to round numbers to any place.

Having been introduced to multiplication and division in grade 3, grade 4 learners use these understandings to find factor pairs and to determine whether one whole number is a multiple of another one-digit number. They deepen their understanding of multiplication and relationships to represent verbal statements of multiplicative comparisons as multiplication equations. They continue to solve multistep word problems and extend that skill to interpreting problems for which the remainder must be interpreted. Learners represent these problems using equations with a variable. They use both mental computation and estimation strategies to assess the reasonableness of their answers.

In grade 3, learners' experiences developed fluency for addition and subtraction within 1000. They demonstrated fluency using various strategies and algorithms based on place value or properties of operations. In grade 4, students become fluent with the standard algorithm for addition and subtraction for any multi-digit whole numbers.

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Guiding Questions

- How do we generate a number or shape pattern that follows a given rule?
- How do we identify apparent features of the pattern that were not explicit in the rule itself?
- How do we find factor pairs?
- How do we recognize that a whole number is a multiple of each of its factors?

- How do we determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number?
- How do we determine whether a given whole number in the range 1–100 is prime or composite?
- How do we interpret a multiplication equation as a comparison?
- How do we represent verbal statements of multiplicative comparisons as multiplication equations?
- How do we multiply or divide to solve word problems?
- How do we solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted?
- How do we represent these problems using equations with a letter standing for the unknown quantity?
- How do we assess the reasonableness of answers using mental computation and estimation strategies including rounding?

Standards

Standards (Taught and Assessed):

- Ⓞ **4.OA.C.5** Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. *For example, given the rule “Add 3” and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.*
- **4.OA.B.4** Find all factor pairs for a whole number in the range 1–100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1–100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1–100 is prime or composite.
- **4.OA.A.1** Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
- **4.OA.A.2** Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.
- **4.OA.A.3** Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Unit 2 Module A

Unit Title: Mathematics – Multi-digit Multiplication and Division & Fraction Equivalence – Unit 2 – Module A

Grade level: Grade 4

Timeframe: 26 Days

Rationale

Grade 4 – Multi-digit Multiplication and Division & Fraction Equivalence – Unit 2

In Unit 2, learners extend their work with multiplication and division to focus on multi-digit numbers. They multiply whole numbers up to four digits by a one-digit number and multiply two two-digit numbers. They work with four-digit dividends and one-digit divisors to find whole number quotients. Learners continue to use strategies based on place value and the properties of operations from grade 3 to multiply and divide, while illustrating and explaining their calculations using equations, rectangular arrays, and area models. Learners build on the work of the prior unit – solving word problems that involve multiplicative comparison – to solve multi-step word problems involving the four operations. They represent these problems using equations with variables and they use mental computation and appropriate estimation strategies to determine whether their answers are reasonable.

In the second module of this unit, learners build upon their grade 3 understanding of fraction equivalence. In grade 3, learners determined fraction equivalence by comparing size or by locating fractions at the same point on the number line. They also recognized and generated simple equivalent fractions and used visual fraction models to illustrate their equivalence. Now in grade 4, learners compare the number of parts and the size of the parts when comparing two fractions that are the same size. They use this principle to recognize and generate equivalent fractions.

Unit 2 concludes as students develop understanding of adding and subtracting fractions as joining and separating parts that refer to the same whole. With this understanding in place, they then decompose fractions whose numerator is larger than into a sum of fractions and justify these decompositions with visual fraction models.

Guiding Questions

- How do we multiply a whole number of up to four digits by a one-digit number?
 - How do we illustrate and explain the calculation by using equations, rectangular arrays, and/or area models?
 - How do we find whole number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division?
 - How do we illustrate and explain the calculation by using equations, rectangular arrays, and/or area models?
 - How do we solve multistep word problems posed with whole numbers and having whole-number answers using the four operations?
 - How do we represent these problems using equations with a letter standing for the unknown quantity?
 - How do we assess the reasonableness of answers using mental computation and estimation strategies including rounding?
 - How do we apply the area and perimeter formulas for rectangles in real world and mathematical problems?
 - How do we fluently add and subtract multi-digit whole numbers using the standard algorithm?
-

Standards

Standards (Taught and Assessed):

- **4.NBT.B.5** Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
- **4.NBT.B.6** Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
- **4.OA.A.3** Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
- **4.MD.A.3** Apply the area and perimeter formulas for rectangles in real world and mathematical problems. *For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.*
- **4.NBT.B.4** Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Unit 2 Module B

Unit Title: Mathematics – Multi-digit Multiplication and Division & Fraction Equivalence – Unit 2 – Module B

Grade level: Grade 4

Timeframe: 19 Days

Rationale

Grade 4 – Multi-digit Multiplication and Division & Fraction Equivalence – Unit 2

In Unit 2, learners extend their work with multiplication and division to focus on multi-digit numbers. They multiply whole numbers up to four digits by a one-digit number and multiply two two-digit numbers. They work with four-digit dividends and one-digit divisors to find whole number quotients. Learners continue to use strategies based on place value and the properties of operations from grade 3 to multiply and divide, while illustrating and explaining their calculations using equations, rectangular arrays, and area models. Learners build on the work of the prior unit – solving word problems that involve multiplicative comparison – to solve multi-step word problems involving the four operations. They represent these problems using equations with variables and they use mental computation and appropriate estimation strategies to determine whether their answers are reasonable.

In the second module of this unit, learners build upon their grade 3 understandings of fraction equivalence. In grade 3, learners determined fraction equivalence by comparing size or by locating fractions at the same point on the number line. They also recognized and generated simple equivalent fractions and used visual fraction models to illustrate their equivalence. Now in grade 4, learners compare the number of parts and the size of the parts when comparing two fractions that are the same size. They use this principle to recognize and generate equivalent fractions.

Unit 2 concludes as students develop understanding of adding and subtracting fractions as joining and separating parts that refer to the same whole. With this understanding in place, they then decompose fractions whose numerator is larger than into a sum of fractions and justify these decompositions with visual fraction models.

Guiding Questions

- How do we explain why a fraction a/b is equivalent to a fraction $(n \times a)/(n \times b)$ by using visual fraction models?

- How do we use this principle to recognize and generate equivalent fractions?
- How to compare two fractions with different numerators and different denominators by creating common denominators or numerators, or by comparing to a benchmark fraction such as $\frac{1}{2}$?
- How do we recognize that comparisons are valid only when the two fractions refer to the same whole.
- How do we record the results of comparisons with symbols $>$, $=$, or $<$.
- How do we understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$?
- How do we understand addition and subtraction of fractions as joining and separating parts referring to the same whole.
- How do we understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$?
- How do we decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation?
- How do we justify decompositions, e.g., by using a visual fraction model?

Standards

Standards (Taught and Assessed):

- **4.NF.A.1** Explain why a fraction a/b is equivalent to a fraction $(n \times a)/(n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.
- **4.NF.A.2** Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as $1/2$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols $>$, $=$, or $<$.
- **4.NF.B.3** Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.
 - Understand addition and subtraction of fractions as joining and separating parts referring to the same whole.
- **4.NF.B.3** Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.
 - Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each decomposition by an equation. Justify decompositions, e.g., by using a visual fraction model. *Examples:* $3/8 = 1/8 + 1/8 + 1/8$; $3/8 = 1/8 + 2/8$; $2 \frac{1}{8} = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$.

Unit 3 Module A

Unit Title: Mathematics – Building Fractions & Decimal Notation – Unit 3 – Module A

Grade level: Grade 4

Timeframe: 16 Days

Rationale

Grade 4 – Building Fractions & Decimal Notation – Unit 3

The focus of Unit 3 is early operations with fractions. Learners add and subtract fractions with like denominators. They solve word problems involving both addition and subtraction of fractions, including fractions data gathered from line plots. Learners multiply fractions by whole numbers and understand that fractions that are not unit fractions are multiples of some basic unit fraction. As with earlier grades, learners continue to model their fractions understanding with visual fraction models .

Previous understandings of fraction equivalence are extended to express a fraction with denominator 10 as an equivalent fraction with denominator 100. Learners use this technique to add two fractions with respective denominators 10 and 100, use decimal notation for fractions with these two denominators, and compare two decimals. The unit concludes as learners revisit solving multi step word problems posed with whole numbers and use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money. These problems include those involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.

Guiding Questions

- How a fraction a/b with $a > 1$ as a sum of fractions $1/b$?
- How a fraction a/b with $a > 1$ as a sum of fractions $1/b$?
- How to make a line plot to display a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$)?
- How to Solve problems involving addition and subtraction of fractions by using information presented in line plots?
- How to apply and extend previous understandings of multiplication to multiply a fraction by a whole number?

Standards

Standards (Taught and Assessed):

- **4.NF.B.3** Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.
 - c. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.
- **4.NF.B.3** Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.
 - d. Solve word problems involving addition and subtraction of fractions, referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem.
- **4.MD.B.4** Make a line plot to display a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$). Solve problems involving addition and subtraction of fractions by using information presented in line plots. *For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection.*
- **4.NF.B.4** Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.
 - a. Understand a fraction a/b as a multiple of $1/b$. *For example, use a visual fraction model to represent $5/4$ as the product $5 \times (\frac{1}{4})$, recording the conclusion by the equation $5/4 = 5 \times (\frac{1}{4})$.*
 - **4.NF.B.4** Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.
 - b. Understand a multiple of a/b as a multiple of $1/b$, and use this understanding to multiply a fraction by a whole number. *For example, use a visual fraction model to express $3 \times (2/5)$ as $6 \times (1/5)$, recognizing this product as $6/5$.
(In general, $n \times (a/b) = (n \times a)/b$.)*
 - **4.NF.B.4** Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.
 - c. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. *For example, if each person at a party will eat $3/8$ of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?*

Unit 3 Module B

Unit Title: Mathematics – Building Fractions & Decimal Notation – Unit 3 – Module B

Grade level: Grade 4

Timeframe: 24 Days

Rationale

Grade 4 – Building Fractions & Decimal Notation – Unit 3

The focus of Unit 3 is early operations with fractions. Learners add and subtract fractions with like denominators. They solve word problems involving both addition and subtraction of fractions, including fractions data gathered from line plots. Learners multiply fractions by whole numbers and understand that fractions that are not unit fractions are multiples of some basic unit fraction. As with earlier grades, learners continue to model their fractions understanding with visual fraction models .

Previous understandings of fraction equivalence are extended to express a fraction with denominator 10 as an equivalent fraction with denominator 100. Learners use this technique to add two fractions with respective denominators 10 and 100, use decimal notation for fractions with these two denominators, and compare two decimals. The unit concludes as learners revisit solving multistep word problems posed with whole numbers and use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money. These problems include those involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit.

Guiding Questions

- How do we express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100?
- How do we use decimal notation for fractions with denominators 10 or 100?
- How do we compare two decimals to hundredths by reasoning about their size.
- How do we recognize that comparisons are valid only when the two decimals refer to the same whole?
- How do we record the results of comparisons with the symbols $>$, $=$, or $<$?
- How do we know relative sizes of measurement units within one system of units including km, m, cm. mm; kg, g; lb, oz.; l, ml; hr, min, sec.

- within a single system of measurement, express measurements in a larger unit in terms of a smaller unit?
- How do we record measurement equivalents in a two-column table?
 - How do we use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit?
 - How do we represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale?
 - How do we represent fluently add and subtract multi-digit whole numbers using the standard algorithm?
 - How do we solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted?
 - How do we represent these problems using equations with a letter standing for the unknown quantity?
 - How do we assess the reasonableness of answers using mental computation and estimation strategies including rounding?

Standards

Standards (Taught and Assessed):

- **4.NF.C.5** Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. *For example, express $3/10$ as $30/100$, and add $3/10 + 4/100 = 34/100$.*
- **4.NF.C.6** Use decimal notation for fractions with denominators 10 or 100. *For example, rewrite 0.62 as $62/100$; describe a length as 0.62 meters; locate 0.62 on a number line diagram.*
- **4.NF.C.7** Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$.
- **4.MD.A.1** Know relative sizes of measurement units within one system of units including km, m, cm. mm; kg, g; lb, oz.; l, ml; hr, min, sec. Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. *For example, know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36), ...*
- **4.MD.A.2** Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.
- **4.NBT.B.4** Fluently add and subtract multi-digit whole numbers using the standard algorithm.
- **4.OA.A.3** Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Unit 4 Module A

Unit Title: Mathematics – Geometry and Measurement – Unit 4 – Module A

Grade level: Grade 4

Timeframe: 13 Days

Rationale

Grade 4 – Geometry and Measurement – Unit 4

In this final unit, learners build, draw, and analyze two-dimensional shapes to deepen their understanding of properties of two-dimensional objects and the use of them to solve problems involving symmetry. They identify key parts of figures such as parallel lines, perpendicular lines, points, line segments, and right angles. Learners recognize angles as geometric shapes formed by two rays, understand concepts of angle measurement, and measure angles using protractors. They sketch angles and use the understanding that angle measure is additive to create and solve equations to find unknown angle measures.

Guiding Questions

- How do we draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines?
- How do we identify these in two-dimensional figures?
- How do we classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size?
- How do we recognize right triangles as a category, and identify right triangles?
- How do we recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts?
- How do we identify line-symmetric figures and draw lines of symmetry?

Standards

Standards (Taught and Assessed):

© 4.G.A.1 Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in
CAR_Mathematics-Gr.4-Unit 4-Module August.2019

two-dimensional figures.

- Ⓒ **4.G.A.2** Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.
- Ⓒ **4.G.A.3** Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry.

Unit 4 Module B

Unit Title: Mathematics – Geometry and Measurement – Unit 4 – Module B

Grade level: Grade 4

Timeframe: 12 Days

Rationale

Grade 4 – Geometry and Measurement – Unit 4

In this final unit, learners build, draw, and analyze two-dimensional shapes to deepen their understanding of properties of two-dimensional objects and the use of them to solve problems involving symmetry. They identify key parts of figures such as parallel lines, perpendicular lines, points, line segments, and right angles. Learners recognize angles as geometric shapes formed by two rays, understand concepts of angle measurement, and measure angles using protractors. They sketch angles and use the understanding that angle measure is additive to create and solve equations to find unknown angle measures.

Guiding Questions

- How do we recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement?
- How do we measure angles in whole-number degrees using a protractor?
- How do we sketch angles of specified measure?
- How do we recognize angle measure as additive?
- How do we solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted?
- How do we represent these problems using equations with a letter standing for the unknown quantity?
- How do we assess the reasonableness of answers using mental computation and estimation strategies including rounding?
- How do we fluently add and subtract multi-digit whole numbers using the standard algorithm?

Standards

Standards (Taught and Assessed):

- © **4.MD.C.5** Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement:
- An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through $1/360$ of a circle is called a “one degree angle,” and can be used to measure angles.
 - An angle that turns through n one-degree angles is said to have an angle measure of n degrees.
- © **4.MD.C.6** Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.
- © **4.MD.C.7** Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure.
- **4.OA.A.3** Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
- **4.NBT.B.4** Fluently add and subtract multi-digit whole numbers using the standard algorithm.

Establish a non-verbal cue to redirect students when not on task.Students may use a bilingual dictionary.</p>

<p>4.MD.C.5 – WALT angles are measured in degrees</p>	<ul style="list-style-type: none"> angles are measured with reference to a circle with its center at a common endpoint of the rays the unit of measure for angles is degrees full rotation from the center of a circle is 360 degrees an angle that turns through 1/360 degree is called a "one degree" angle "one degree" angle can be used to measure angles measure an angle using a protractor sketch angles when given a measurement use a protractor to create a give angle an angle is the union of two rays with the same initial point angles are measured with reference to a circle with its center at a common endpoint of the rays 	<ul style="list-style-type: none"> 	<ul style="list-style-type: none"> Additional Coverage: <i>Lesson 32: Add and Subtract with Angles</i> <p>Online Resources:</p> <ul style="list-style-type: none"> i-ready Lessons Nearpod Lessons <u>Measuring Angles</u> <u>Learning Zillion</u> <u>Virtual Nerd – Angles</u> <u>Virtual Nerd – Degrees</u> <u>Study Jams – Review: Types of Lines</u> <u>Study Jams – Review: Classify Angles</u> <u>Study Jams – Construct Angles</u> <u>Study Jams – Measuring Angles</u> <u>Khan Academy – Questions and Video Lessons</u> <u>Angles of 90, 180, 270, and 360 degrees</u> <u>Angles of 90, 180, 270, and 360 degrees</u> <u>Estimate angle measurements</u> <u>Adjacent angles</u> 	<p>GT: Provide enrichment activities to expand upon the curriculum. Use higher level questioning techniques in class and on assessments.</p> <p>At risk: Individualized as needed</p> <p>IEP/504: Modifications/ Accommodations as stated in IEP</p>
<p>4.MD.C.5a – WALT an angle is measured by considering the fraction of the circular arc that is between the two points where the two rays intersect the circle</p>				
<p>4.MD.C.5a – WALT a “one degree angle” is defined as 1/360 of the entire circle</p>				
<p>4.MD.C.5b – WALT one degree angles can be used to measure angles</p>				

	<ul style="list-style-type: none"> an angle that turns counterclockwise through "n" one-degree angles has a measure of "n" degrees <p>Essential Vocabulary:</p> <p>arc central angle circular degree endpoint line segment point ray turn vertex</p>			
<p>4.MD.C.6 – WALT measure angles in whole-number degrees using a protractor</p> <p>4.MD.C.6 – WALT sketch angles that have a specified measure</p>	<p>Think about what I know/what I have learned about:</p> <ul style="list-style-type: none"> an angle is the union of two rays with the same initial point angles are measured with reference to a circle with its center at a common endpoint of the rays the unit of measure for angles is degrees and can be 	<ul style="list-style-type: none"> i-ready Do Now-Math Problem of the Day Spiral Review Standards Assessment Exit Ticket for each lesson 	<p>Activities:</p> <ul style="list-style-type: none"> Ready Math Lesson 31: Angles; Lesson 32 Add and Subtract with Angles Standards based hands on activity <p>Online Resources:</p> <ul style="list-style-type: none"> i-ready Lessons Nearpod Lessons Learn Zillion – Measure and sketch 	<p>ELL:Model and Provide Example. Establish a non-verbal cue to redirect students when not on task.Students may use a bilingual dictionary.</p> <p>GT:Provide enrichment activities to expand upon the curriculum.Use higher level questioning techniques in class and on assessments.</p>
<p>4.MD.C.7 – WALT angle measure as additive</p>				

<p>4.MD.C.7 – WALT when an angle is decomposed into non-overlapping parts, the angle measurement of the whole equals the sum of the angle measures of its parts</p>	<p>measured using a protractor</p> <ul style="list-style-type: none"> ● a full rotation from the center of a circle is 360 degrees ● "one degree" angle can be used to measure angles ● angle that turns counterclockwise through "n" one-degree angles has a measure of "n" degrees ● sketch a variety of angles of a specified measure ● measure angles in whole-number degrees using a protractor ● non-overlapping angle segments can be added to find the total sum of the angle measures ● angle measures are additive ● whole angle is the sum of the angle parts ● that angles can be decomposed into parts 	<ul style="list-style-type: none"> ● i-ready ● Do Now-Math Problem of the Day ● Spiral Review Standards Assessment ● Exit Ticket for each lesson 	<ul style="list-style-type: none"> ● angles using a protractor ● <u>Learn Zillion</u> ● <u>–Compose and Decompose Angles</u> ● <u>Khan Academy – Questions and Video Lessons</u> ● <u>Measure angles with a protractor</u> ● <u>Estimate angle measurements</u> ● <u>Adjacent angles</u> ● <u>Measuring Angles</u> ● <u>Compose & Decompose Angles</u> 	<p>At risk: Individualized as needed</p> <p>IEP/504: Modifications/ Accommodations as stated in IEP</p>
<p>4.MD.C.7 – WALT solve addition and subtraction problems to find unknown angle measures on a diagram in real world and mathematical problems</p>				

- develop mental images for important benchmark angles (30o, 45o, 60o, and 90o)
- determine whether to add or subtract to find the unknown angle on a diagram in real world and mathematical problems
- write an equation with a symbol for the unknown angle measure

Essential Vocabulary:

acute angle
 adjacent angles
 additive angle
 complementary angles
 protractor
 degrees
 non-overlapping
 obtuse angle
 ray
 right angle
 straight angle
 supplementary angles

<p>4.OA.A.3 – WALT solve multi-step whole number word problems that have whole number answers, including problems in which remainders must be interpreted</p>	<p>Think about what I know/what I have learned about:</p> <ul style="list-style-type: none"> estimation strategies mental math strategies a letter represents an unknown quantity represent multi-step word problems using equations and a symbol for the unknown interpret multi-step word problems and determine the appropriate operation to solve use mental math and estimation to determine the reasonableness of an answer interpret a remainder based on the context of a problem. 	<ul style="list-style-type: none"> i-ready Do Now-Math Problem of the Day Spiral Review Standards Assessment Exit Ticket for each lesson 	<p>Activities:</p> <ul style="list-style-type: none"> Ready Math Lesson 10; Model and Solve Multi-Step Problems Standards based hands on activity Additional Coverage: <i>Lesson 28: Problems About Time an Money;</i> <i>Lesson 29: problems About length, Liquid Volume, Mass, and Weight</i> <p>Online Resources:</p> <ul style="list-style-type: none"> i-ready Lessons Nearpod Lessons 4.OA.A.3 Lesson A - Includes printable classwork and homework 4.OA.A.3 Lesson B - Includes printable classwork and homework 4.OA.A.3 A&B Answers Learn Zillion Video Lessons Study Jams - Word Problems to Equations 	<p>ELL:Model and Provide Example. Establish a non-verbal cue to redirect students when not on task.Students may use a bilingual dictionary.</p> <p>GT:Provide enrichment activities to expand upon the curriculum.Use higher level questioning techniques in class and on assessments.</p> <p>At risk:Individualized as needed</p> <p>IEP/504: Modifications/ Accommodations as stated in IEP</p>
<p>4.OA.A.3 – WALT represent these problems using equations with a letter standing for the unknown quantity</p>				
<p>4.OA.A.3 – WALT assess the reasonableness of answers using mental computation, estimation strategies, and rounding</p>				

<p>4.NBT.B.4 – WALT add multi-digit whole numbers using the standard algorithm with accuracy and efficiency</p> <p>4.NBT.B.4 – WALT subtract multi-digit whole numbers using the standard algorithm with accuracy and efficiency</p>	<p>Think about what I know/what I have learned about:</p> <ul style="list-style-type: none"> ● basic addition facts ● basic subtraction facts ● how to add with regrouping ● how to subtract with regrouping 		<ul style="list-style-type: none"> ● <u>Study Jams - Reasonableness & Estimation</u> ● <u>Study Jams - Equations & Word Problems</u> ● <u>Khan Academy - Questions and Video Lessons</u> ● <u>Multi-Step Word Problems</u> ● <u>Multi-Step Word Problems & Video Lessons</u> ● <u>Multi-Step Word Problems with Estimating - Upper Level</u> ● <u>Multi-Step Word Problems I</u> ● <u>Multi-Step Word Problems II</u> ● <u>4.OA.A.3 Worksheets</u>
